

Build Systems That *Improve* Themselves

Four audits to find where your self-improvement loop is stuck at surface-level habits instead of compounding underneath.

NAME

DATE

REVIEW DATE

1

Audit Your Information Diet

- List the **3 sources** you consumed most this week. Did each give you a *model* for thinking, or just an update?
- Pick one piece of content. Write what you **learned** vs. what you now *see differently* — if only the first fills in, it doesn't compound.
- Name a source that leaves you feeling informed but never changes a decision. What replaces it?
- Before consuming anything new this week, write the **question** you're trying to answer. Does the source answer it, or add noise?

SOURCES TO CUT

2

Map Your Habit Chain

- Write your **actual** morning sequence, step by step — not the wished-for version.
- Circle the *keystone* habit that makes the next one easier. Is it getting priority, or the first thing skipped?
- Pick a habit you're struggling to install. What existing behavior could it attach to?
- Skip your keystone for **3 days**. Write exactly what unraveled downstream.

KEYSTONE HABIT

3

Review Your Reviews

- Pull your last **3 months** of journal entries. What theme keeps showing up that you've never acted on?
- Find a week you blamed on *"low motivation."* What happened the week before — was shipping something the real variable?
- Answer the meta-question right now: **"What question am I not asking myself that I should be?"**
- Set the actual date for your first review-of-reviews this month.

PATTERN FOUND

4

Find Your Highest-Leverage Skill

- List **3 skills** you're building. For each: does improving it make any other skill easier?
- Identify the *one* skill that, improved 20%, would make the most other things easier.
- Name a skill you've treated as isolated that's actually a hidden unlock for 2-3 goals.
- Write **one concrete action** this week toward that highest-leverage skill instead of a lower one.

LEVERAGE SKILL
