GitHub Audit Practice

Part 1: Audit and Categorise

Use the word bank to identify the correct component type for each repository issue.

word bank: src layout • requirements.txt • README • CLI entrypoint • unit test • dockerfile

	Issues Found	Requirement
1.	Notebook has no file to manage dependency versions	
2.	Project code is cluttered in the root folder	
3.	No instructions on how to execute the project	
4.	Script requires manual editing to start execution	

Part 2: Business Translation

Read each technical summary and provide the corresponding business impact focus.

1. Our model achieved 94% accuracy on the test set using a random forest regressor.

.....

2. The feature engineering pipeline reduces processing latency by 300 milliseconds.

.....

3. We implemented cross-validation to mitigate the risk of overfitting.

.....

Part 3: Strategic Planning

Plan your next 90-day project using the framework below.

Problem Statement (One Sentence):

Key Components and Deliverables:

Definition of Done (GitHub codebase requirements):

Answer Key

Part	Answers
Part 1: Audit and Categorise	1. requirements.txt 2. src layout 3. README 4. CLI entrypoint
Part 2: Business Translation	1. Answers will vary (Focus on outcome) 2. Answers will vary (Focus on efficiency) 3. Answers will vary (Focus on reliability)
Part 3: Strategic Planning	Answers will vary. Example: Project plan completed with clearly defined MVP components.
